

Vindico's durable protective coating is like an invisible barrier against the damaging effects of limescale, soap scum, mineral deposits and rust stains.

Unprotected Glass

Glass Protected with Vindico

A VINDICO PROTECTED SHOWER:

- Stays Cleaner and Sparkling
- Resists Stains & Discoloration
- Requires Less Cleaning
- Cleans Faster and Easier
- Lasts Years & Years -

A Minimum Guarantee of 10 Years

Advanced Durability and Long Lasting Protection Through Better Science

Vindico has been independently tested and verified to:

- Provide greater durability than other glass coatings
- Offer greater abrasion resistance – protection that lasts
- Reduce maintenance and keep glass cleaner

What does Vindico do?

Vindico creates an easy clean, hydrophobic (water hating) surface on glass. This reaction causes water to bead up and run off glass, greatly reducing contamination on surfaces.

Just as important as forcing water off the surface, Vindico's durable coating protects surfaces from water spots, rust and mineral deposits. These harmful contaminants can cause discoloration, heavy limescale and even permanent damage.

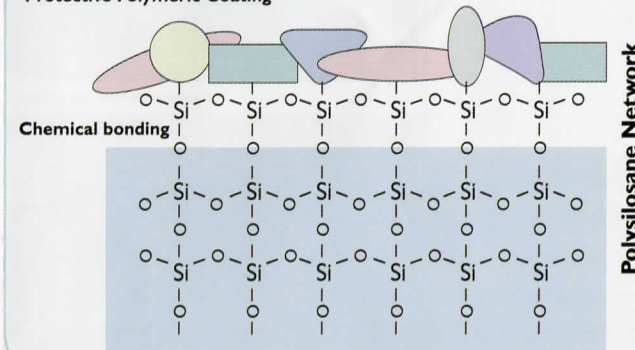

Vindico treated glass creates an easy clean surface and does not require expensive or specialty cleaning products. Simply use any cleaner formulated for glass.

How does it work?

Vindico reacts with glass and chemically bonds to the surface, creating a durable protective layer. Once chemically bonded, a durable network of polysiloxanes is formed. This multi-molecular structure protects glass from organic and inorganic contamination and is completely UV stable. Vindico chemically bonds to glass for durability that lasts and lasts.

VINDICO means "protection" in Latin, and superior performance in any language!

Protective Polymeric Coating

Vindico chemically bonds to glass for durability that lasts and lasts!
